

KRISHNA THOLUDUR

(805) 559-1946 | katholud@g.ucla.edu | Los Angeles, CA | Website: destroh33.github.io/portfolio-site

EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA

Bachelor's of Science - BS, Computer Science

- Cumulative GPA: 3.97
- Relevant Coursework: Intro to Computer Science I, Intro to Computer Science II, Intro to Computer Organization, Engineering Design: Game Development, Software Construction, Introduction to Algorithms and Complexity

TECHNICAL SKILLS

Languages: C/C++, C#, Java, Python, JavaScript/TypeScript, Bash, x86-64 Assembly

Tools: Unreal Engine, Unity, Blender, Git, Node.js, React Native, Docker

EXPERIENCE

Cross Movements Disorder Lab - UCLA

Los Angeles, CA

Researcher/VR Developer

October 2025 - Present

- Building immersive VR environments in Unreal Engine and Unity for clinical research on Parkinson's disease, supporting studies on "freezing of gait" and patient motor responses to environmental stimuli.
- Configured 25+ MetaHuman AI navigation and appearance parameters in Unreal to enhance overall patient immersion.
- Developed a custom C# runtime scene configuration system in Unity, procedurally repositioning and rotating obstacle geometry via transform hierarchies, eliminating manual scene setup between trials and speeding up experiment iteration.

Curriculum Developer and Course Instructor - UCLA

Los Angeles, CA

E1 Game Development in Unity

March 2025 - Present

- Redesigned and improved curriculum for UCLA's 10-week for-credit E1 Game Development course, integrating Unity 6 features and URP workflows to teach industry-aligned best practices
- Instructor during Winter quarter, instructing 20+ students on end-to-end Unity game development workflows

ACM Studio - UCLA

Los Angeles, CA

Co-President

March 2026 - Present

- Taught standalone game development workshops for 50+ students in both Unity and Unreal Engine, covering AI behavior programming, technical art workflows, environmental design, and C#/C++ scripting
- Led the creation of VR in Unity workshop series, guiding students through the end to end development of a VR game using OpenXR and XR Interaction Toolkit packages to interface with Meta Quest headsets

PROJECTS

Prime Weaver - UE5 Roguelike Game

Los Angeles, CA

Personal Project

June 2025 - Present

- Built a modular spellcasting system in Unreal using C++ inheritance and clean OOP, defining base spell classes with overrideable behaviors to support 15+ elemental ability combinations and future expansion.
- Implemented physics-driven combat in Unreal with animation-blueprint blending and optimized Niagara/VFX systems.
- Leading a 10+ person team in ACM Studio's Students-Run-Studios (SRS) program, integrating Agile workflows to expand content, refine gameplay systems, and prepare the game for eventual Steam release.

Bean Boxers - Unity Multiplayer Fighting Game

Los Angeles, CA

Personal Project

December 2025 - Present

- Built a server-authoritative multiplayer 3D arena brawler in Unity 6 using FishNet, implementing server-side physics, movement, collision, and combat validation to ensure deterministic knockback behavior and prevent client-side desync.
- Deployed dedicated Linux headless Unity servers on Edgegap, integrating a secure backend-driven matchmaking flow to provision and reuse server instances while supporting WebGL clients over WebSocket transport.

Amblr - AI Tour Guide App

Los Angeles, CA

CS35L Final Project

October - December 2025

- Built an AI-driven, location-aware mobile app in React Native in 6 weeks using Google Maps and Gemini REST APIs, enabling real-time generative narration, GPS-based triggers, and dynamic UI updates.
- Implemented efficient async pipelines for smoother content delivery and more reliable performance during continuous user movement.

One in the Chamber - Unity Puzzle Game

Los Angeles, CA

Studio Game Jam (1st out of 9)

November 2025

- Developed a one-bullet puzzle prototype in Unity, implementing raycast hit detection, oil-spill ignition and explosion interactions, and integrating custom VFX and 3D animations made in Blender and developed core gameplay logic using C#
